Ovo in Unity 6.6: picture version roadmap

Follow the phases in order. Every phase ends with a CHECK. Do not move on until the check passes. Files come from the folder UnityPort_Image.

Flow at a glance: Install Unity -> Create project -> Fix settings -> Export level -> Copy files -> One-click setup -> Play -> Build.

Where every file goes

File	Put it in
OvoGame.cs	Assets/Scripts
LevelSettings.cs	Assets/Scripts
HazardZone.cs	Assets/Scripts
NoSwapZone.cs	Assets/Scripts
OvoSprite.shader	Assets/Shaders
OvoImageSetup.cs	Assets/Editor (the folder must be named exactly Editor)
level.png	Assets/Level1
level.json	Assets/Level1

Phase 1. Install Unity

1. Go to https://unity.com/download, install Unity Hub and sign in with a free Unity ID (Personal licence).
2. Unity Hub -> Installs -> Install Editor. Choose Unity 6.6 (6000.6.x). If it is not listed use the Archive link on that screen.
3. Tick Windows Build Support, then install.

CHECK: the editor shows under Installs in the Hub.

Phase 2. Create the project

1. Hub -> Projects -> New project -> template Universal 2D (click Download template if needed).
2. Save it in a short folder without spaces and outside OneDrive, for example D:\Unity\Ovo.
3. Click Create project and wait for the first open.

CHECK: the Hierarchy panel shows a Main Camera.

Phase 3. Fix settings before adding any file

1. Burst off: top menu Jobs -> Burst -> click Enable Compilation so the tick disappears. This stops the Windows 'blocked by code integrity policy' message.
2. Keyboard on: Edit -> Project Settings -> Player -> Other Settings -> Active Input Handling -> Input System Package (New) (or Both). Click Yes to restart Unity.
3. Window -> Package Manager -> change the top-left dropdown to In Project. The list must contain Input System. If not: switch the dropdown to Unity Registry, search Input System, click Install.
4. Optional: remove any package named AI Assistant, AI Generators or Unity AI (In Project list -> Remove). This stops the NoSubscription message.
5. In the Console click Clear.

CHECK: the Console is empty or shows only the harmless messages in the table at the end.

Phase 4. Export the level from the web game

1. Double-click ovivo-level-exporter-image.html (open it in Chrome). Wait 3 seconds until the game appears.
2. Click 1. Download level.png, then 2. Download level.json.
3. If Chrome asks to allow multiple downloads, allow it.

CHECK: your Downloads folder has level.png (a few MB) and level.json.

Phase 5. Copy the files into Unity

1. In the Project panel: right-click Assets -> Create -> Folder. Make four folders named exactly Scripts, Shaders, Editor and Level1.
2. Drag all the files into their folders (see the table above). Drag level.png and level.json into Level1 last.
3. Wait until the spinner at the bottom right stops.

CHECK: the top menu bar now has a menu called Ovo, and the Console shows no red error that mentions OvoGame, LevelSettings, OvoImageSetup or the shader.

Phase 6. One-click setup

1. Top menu: Ovo -> Set up Level 1 (picture).
2. This does everything for you: it sets the level.png import settings (sprite, 100 pixels per unit, top-left pivot, Read/Write on, max size 8192, no compression), builds the Level1 prefab with Start, three checkpoints and the Gate, and creates the Game object with all three slots filled.
3. If Unity asks where to save the scene, name it Main and save it in a new folder Scenes.
4. A message saying Done appears.

CHECK: Assets/Level1 contains Level1.prefab, and the Hierarchy contains a Game object. Click Game: Levels shows Level1, Shader shows OvoSprite, Cam shows Main Camera.

Phase 7. Play

1. At the top of the Game view set the dropdown to Full HD (1920x1080).
2. Click once inside the Game view, then press the Play button at the top centre.

What you should see: the black and white level, a small ball above the first floor and a pulsing key sign above it. A and D (or the arrow keys) move. Any other key swaps. The mouse does nothing. Spikes send you back to the last ring. The exit is the set of rings at the far right.

CHECK: the ball falls, slides when you press A or D, and flips direction when you press the space bar.

Phase 8. Build a game you can share

1. File -> Build Profiles. Choose Windows. Click Add Open Scenes.
2. Click Build and choose an empty folder. Run the game from it.

Phase 9. Later: more levels, assets and restrictions

- Max Swaps: open the Level1 prefab, select the root, set Max Swaps (0 = unlimited). Dots above the ball show what is left.
- HazardZone and NoSwapZone: add a Polygon Collider 2D and the script to an empty object inside the prefab.
- More levels: duplicate the Level1 prefab, change the picture on its Art child, move the rings, add it to the Levels list on Game. Tell me and I will extend the setup menu to do this for you.
- The real-geometry map version is a separate folder (UnityPort_RealMap). Finish this version first.

Messages you can ignore and fixes for real problems

Message or problem	What it means	What to do
Burst could not load ... blocked by a Windows code integrity policy	Windows Smart App Control blocks a Unity temp file. Our game does not use Burst	Ignore, or Phase 3 step 1 and delete Library/BurstCache
Error reason is 'NoSubscription' (generators.ai.unity.com)	Unity's paid AI tools	Ignore and click Clear
Layout update failed to stabilize ... MainToolbarWindow	Editor toolbar redraw loop	Ignore. Maximize the window or Window -> Layouts -> Default
No Ovo menu	A red compile error, or OvoImageSetup.cs is not in a folder named exactly Editor	Read the first red error, fix it, check the folder name

Message or problem	What it means	What to do
error CS0246 ... InputSystem	The Input System package is missing	Phase 3 step 3
Shader 'Ovo/Sprite' not found	The shader has not compiled	Click OvoSprite in Project and read the red text in the Inspector
level.png is not 4600x3000	Wrong or old file	Download it again in Phase 4
Everything pink	Shader problem	Send me the shader error
Black screen in Play	Game fields empty or a red Ovo error	Run Ovo -> Set up Level 1 (picture) again and read the Console
Ball does not move	Keyboard setting or no focus	Phase 3 step 2, then click the Game view once

If you are stuck, send me the first red error text and a screenshot of the Hierarchy and the Game object's Inspector.
